Dear Sir/Madam,

**RE: Cloud analytics: Request for response regarding potential misuse of your customer data**

It is apparent from our research (attached and [here](#)) that your products including: Google Accounts, Google Bookmarks, Google Calendar, Google Contacts, Google Chrome, Google Drive, Google Events, Google Fit, Google Keep, Google Location History, Google Mail, Gmail, Google My Activity, Google Photos, Google Password, Google Profile, Google Play, Google Tasks, Google Search History, Google+, YouTube, Hangout and Chrome can be accessed using Cellebrite UFED, Magnet Forensics AXIOM Cloud and Oxygen Forensics Cloud Extractor.

We therefore **seek a response from you on your position on the use of cloud analytics technologies by law enforcement** to obtain cloud stored data as we believe the use of these technologies presents a significant issue for the security of your customers' data.

Cellebrite states for example that they can extract data from your history function which alone enables:

"insights into the subject's intentions and interests by pulling out the history of text searches, visited pages, voice search recordings and translations from Google web history and viewing text searches conducted with Chrome..."

Please respond no later than **17 January 2020**. Please note that we will assume we can publish your response unless you state otherwise. If we do not hear from you, we will publish that you have not responded.

## Summary of the research

- Law enforcement are increasingly using cloud analytics<sup>1</sup>
- This can be used to obtain vast quantities of your customers' data outside the normal legal frameworks for obtaining customer data in the course of criminal investigations e.g. via warrant to Google.
- Emotion and facial recognition can be applied to your customers' data
- Cloud analytics software is being used without any transparency and in the absence of clear, accessible and effective legal frameworks
- There is a risk of abuse and misuse of customer data and miscarriage of justice

## Your customers need you to protect their data

Our research has shown that your customer data can be accessed using cloud extraction software and hardware. Despite the fact that you store your customer data in the Cloud, a YouGov poll<sup>1</sup> revealed that a large number of individuals in the UK do not understand the term 'cloud computing'.

How well, if at all, do you understand what the term 'cloud computing' means?

The results also showed that 45.6% of people have not thought about where data created by apps on their phone is stored and 44.3% of people do not know or think that apps on their phone use cloud storage.

<sup>1</sup> Cellebrite, a prominent vendor of surveillance technology used to extract data from mobile phones, notes in its Annual Trend Survey that in approximately half of all investigations, cloud data 'appears' and that '[t]ypically, this data involves social media or application data that does not reside on the physical device.' That it 'does not reside on the physical device' indicates that law enforcement is turning to 'cloud extraction'.

Do any of the apps on your smartphone use cloud storage?

We believe that it is a serious concern that people don't where their data is stored, but the police do – and they can access vast troves of highly sensitive data at the push of a button.

We look forward to hearing from you.

Kind regards,

Camilla Graham Wood
